SUMMARY

Backend Developer specializing in building scalable and secure backend solutions. Proficient in .NET, C#, and modern backend technologies. Skilled in designing and implementing APIs, managing databases with SQL Server and Redis, and ensuring high performance with seamless API integrations.

EXPERIENCE

Backend developer

Innova Platform

October 2024 - Present, Cairo

- Contributing to the development of a cutting-edge educational platform. Responsible for designing and implementing scalable and secure backend solutions using .NET technologies. Expertise includes database management with Microsoft SQL Server, efficient caching mechanisms using Redis, and seamless integration of APIs to support platform functionality and enhance user experience

Freelance Backend Developer

Self-Employed

February 2025 - Present, Cairo

- Developed a flexible back-end system for The Miller, including a Notion template store and Cashier payment integration, built for scalability.

PROJECT

The Miller - freelance project

themiller.site/

- A freelance back-end project for The Miller, building a scalable management system and Notion template store with Cashier payment integration, tailored to the client's growth needs.

Shop Corn - MVC

github.com/mohamedmadkour102/ShopCorn

- Developed a robust e-commerce MVC website using .NET 7 with a 3-tier architecture, featuring an **Admin Area** for managing categories, products, and roles, and a **Customer Area** for shopping and order processing. Used **Generic Repository**, **Unit of Work**, and **Specification Pattern** for clean, maintainable code. Integrated **Stripe**, and built with **C#**, **.NET MVC**, and **EF Core**.

Talabat - API

github.com/mohamedmadkour102/Talabat.Solution

- Developed a scalable RESTful API using .NET Core 6, .NET Core Identity, and **Onion Architecture** for modularity and maintainability. Implemented **Generic Repository**, **Unit of Work**, and **Specification Pattern** for clean data access and dynamic querying. Integrated **JWT authentication**, **Stripe Payment Gateway**, and used technologies like **C#**, **EF Core**, and **AutoMapper**.

Votely System – Polling and Survey Management

github.com/mohamedmadkour102/Votely

- Developed a secure **polling and survey management system** with features for user authentication, data validation, and background task handling using **.NET 8** and **Entity Framework Core**.
- Integrated **JWT** for authentication, **Hangfire** for background tasks, and **Mapster** for efficient data mapping.
- Employed **Fluent Validation** for input validation and utilized **distributed caching** for performance optimization.
- Implemented **API versioning** and **health checks** for system reliability.

EDUCATION

Bachelor of Computer Science and Artificial Intelligence

Minor in Information System • Helwan University • Cairo • 2025 • 3.69

CERTIFICATIONS

Backend Development Diploma

Route IT Training Center

SKILLS

Back-End Development: C#, OOP, Data Structures, Algorithms, Problem Solving, Design Patterns, SOLID Principles, ASP.NET Core (Web API, MVC), Entity Framework, Dapper, LINQ, SQL/MySQL, Redis, Clean Architecture, RESTful APIs, JWT, .NET Identity, Stripe Integration.

Software Development: Agile, Scrum, SRS Documentation, UML Diagrams, Git/GitHub, SOLID Principles, Design Patterns, Clickup
